OBJECTIVE

Software Development Engineer with 2+ years of experience building AI-integrated production systems, Python-based data pipelines, and cloud infrastructure on AWS. Hands-on experience with LLM integration, medical data analytics, and deploying containerized applications using Kubernetes, Terraform, and Jenkins CI/CD. Certified in Generative AI (MIT AU-KBC) with practical experience fine-tuning LLaMA models and building RAG pipelines using LangChain — focused on engineering reliable, scalable AI systems.

SKILLS

- **Programming & Scripting:** C++, Python, Scala, Dart, Shell/Bash
- **Cloud:** AWS (EC2, S3, IAM, VPC, ECR, EKS, CloudWatch, CodePipeline), Azure (Learning)
- **Containers & Orchestration:** Docker, Kubernetes, Amazon EKS, DockerHub, Helm
- **CI/CD & Automation:** Jenkins, GitHub Webhooks, CI/CD Pipeline Automation
- **Backend & APIs:** Python, Django (Learning), REST APIs, Microservices
- **AI/ML:** LLM Integration, AI Automation, Model Building, Generative AI
- **Embedded/IoT:** Embedded Systems, Microcontrollers, Sensors, Communication Protocols
- **Frontend:** Flutter (Familiar), JavaScript, HTML, CSS, Streamlit
- **Monitoring & Observability:** Prometheus, Grafana
- **Infrastructure as Code:** Terraform, Ansible
- **Version Control:** Git, GitHub, GitLab
- **Operating Systems:** Windows, Linux (Ubuntu)

EXPERIENCE

Software Development Engineer - Buddi.AI
Nov 2025 – **Present**

- Built a Python pipeline that consolidated inputs from JSON files, Excel datasets, and live API endpoints simultaneously, cutting end-to-end analysis time from 3 hours to 45 minutes and producing structured Excel reports with detail sheets for internal QA and medical coder (SME) review.
- Automated data conversion workflows handling text-to-JSON and XML-to-text transformations to standardise API response formats for downstream analysis.
- Developed analytics scripts to generate facility-level, specialty-level, and document-type statistics including incomplete record flags and unique transaction-level counts, used by medical coders to validate AI-generated coding outputs.
- Investigated and resolved duplicate record issues by tracing aggregation logic errors; identified gaps in regex-based evidence patterns that map clinical chart text to medical codes, added new keyword patterns, and fixed regex functions that caused incorrect matches when new patterns were introduced.Delivered feature updates and bug fixes in Scala across the LLM input processing pipeline, validated through regression testing to ensure production stability

Software Engineer - Boodskap Labs Pvt. Ltd.
Sep 2024 – Oct 2025

- Built Flutter UI screens to visualize real-time IoT data streamed from embedded devices on mobile dashboards.
- Integrated medical-grade hardware (Spandan ECG meter, pulse meter) with a mobile application to display live health metrics on a user dashboard.
- Explored Generative AI model building — including training and deploying models — during an internal learning initiative.

Project Intern - Boodskap Labs Pvt. Ltd. Sep 2024 – Apr 2025

- Worked on IoT firmware development including firmware updates, hardware assembly, and R&D with new embedded boards for the NetZero project — a carbon emission reduction platform monitoring water usage, waste, electricity, and air quality in real time.
- Gained hands-on experience integrating firmware with UI layers to fetch and display live sensor data from IoT devices.

PROJECTS

End-to-End DevOps Automation Pipeline

- Built a complete CI/CD pipeline using Jenkins and GitHub Webhooks that automated the entire deployment flow — from code commit to Docker image creation, DockerHub publishing, and Kubernetes deployment on AWS EKS — eliminating manual steps and making deployments consistent and repeatable.
- Provisioned cloud infrastructure using Terraform (VPC, EKS, ECR) as Infrastructure as Code, reducing manual configuration effort and enabling consistent environment setup across deployments.
- Set up Prometheus and Grafana for real-time cluster monitoring and application health dashboards, enabling proactive visibility into system performance.
- Technologies: AWS (EC2, EKS, ECR, CodePipeline), Terraform, Docker, Jenkins, Kubernetes, Helm, Prometheus, Grafana, GitHub.

Unified IoT Monitoring Dashboard – Flutter with IoT Integration

- Contributed to a Flutter-based cross-platform application that unified monitoring of multiple IoT devices into a single dashboard — solving the problem of technicians needing a separate app per device by centralising real-time data from all connected devices in one place.
- Built UI components including device cards and monitoring pages; focused on integrating live sensor data from real embedded devices into the mobile interface, gaining hands-on experience with IoT-to-UI data pipelines.
- The unified dashboard improved monitoring efficiency by giving users a single view across all devices, replacing the fragmented experience of switching between multiple apps — making device management faster and less error-prone.
- Technologies: Flutter, Dart, C++, IoT Protocols, Embedded Systems Integration.

---

EDUCATION

Bachelor of Engineering Information Technology
Graduate in 2024 | CGPA: 7 **Achievements**: NCC “C” Certificate
Higher Secondary (XII) – 73.4% (2020)
Secondary Education (X) – 89% (2018)

CERTIFICATIONS

Generative AI: Math Foundation to Modelling – MIT (AU-KBC), June 2025
DevOps – Guvi HCL, June 2026
